

Network Manager Telecom

Integrated lifecycle management

Network Manager Telecom is the industry's most flexible and comprehensive software to accelerate planning, design, construction, operations and time to revenue.

The end-to-end process really helps us. You go from the design process into a field survey and then into construction. You then have full visibility of ticket progress, all of which really helps us with our KPIs.

- Craig Krammes, Director for IT Engineering Systems

Why Network Manager Telecom?

Network management for every operator

Network Manager Telecom is the industry's leading network management software for everyone from small private networks to national telecom operators, offering the flexibility to meet the size and complexity of any network.

Support for the entire network lifecycle

With a fully integrated architecture, Network Manager Telecom connects end-to-end workflows and applications to streamline and optimize every network process.

Industry-best workflows and templates

Our rapidly deployable solution and easy-to-use interface empower every team to execute work according to leading industry standards – without changing your network model.

Best-in-class mobility

Network Manager Telecom enables field teams to document and manage data online or offline, more powerfully and flexibly than other solutions, ensuring accurate, up-to-date data.

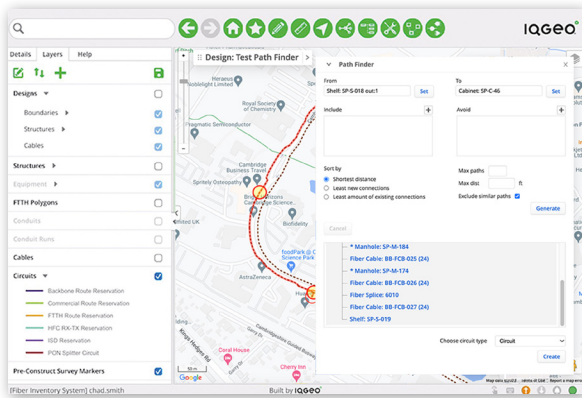

Scalability for the future

As your network architecture, IT systems, and number of users and business objectives evolve, our scalable solution can model future network architectures, operational requirements, business needs, and data sources to continuously enhance your network.

Investment protection

Network Manager Telecom is available in Insight, Professional, and Enterprise editions that meet evolving requirements and protect your technology investment.

Optimize network design from the field with the Path Finder tool

Easily view splice tray connections, from the office or field

Who uses Network Manager Telecom?

Municipalities, educational and corporate campuses, transit authorities, utilities, commercial broadband and fiber network operators, DOTs / Intelligent Transportation Systems, and cable network operators.

IQGeo Integrated Network

A single platform across the lifecycle

The telecom industry's only single platform to enable operators to deploy and operate networks across the entire lifecycle, from planning and design to operations and sales.

- Integration across the lifecycle
- Automated planning and estimating
- Accelerated network designs
- Accurate, efficient builds
- Maximized network revenues
- Single view of network data

With a single, shared view of network data and streamlined workflows, IQGeo gives companies the speed, efficiency and precision they need to deliver great service and stay ahead of the competition.
